PASS

An Open Source Decentralized Digital Wallet

Overview

PASS is an open source digital wallet built using the **Solid Data Framework** for providing home insecure individuals a safe place to store documents within their control.

PASS aims to assist caseworkers with processing and providing documents needed to complete the housing assistance application process.

PASS is currently at MVP.

Overview: Solid

Aims to radically change the way Web applications work today, resulting in true data ownership as well as improved privacy.

- "social linked data"
- Set of conventions and tools for building decentralized social applications based on **Zero Trust Linked Data** principles.

Overview: Solid

Key Features:

True data ownership

Users should have the freedom to choose where their data resides and who is allowed to access it. By decoupling content from the application itself, users are now able to do so.

Modular design

Applications are decoupled from the data they produce, users will be able to avoid vendor lock-in, seamlessly switching between apps and personal data storage servers without losing any data or social connections.

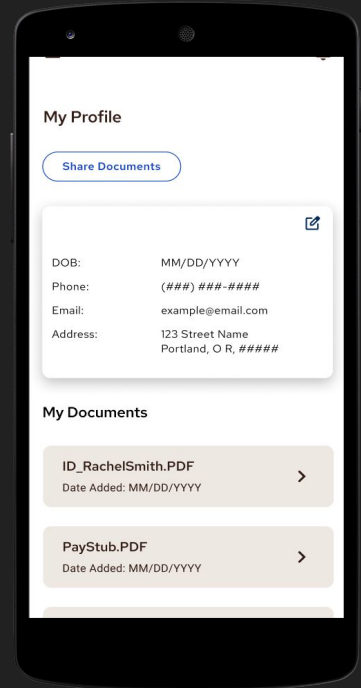

Reusing existing data

Developers will be able to easily innovate by creating new apps or improving current apps, all while reusing existing data that was created by other apps.

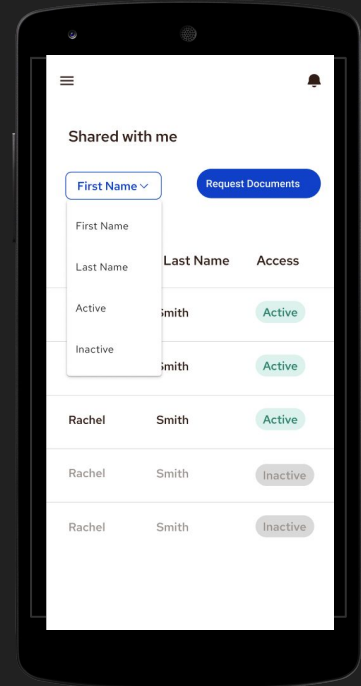

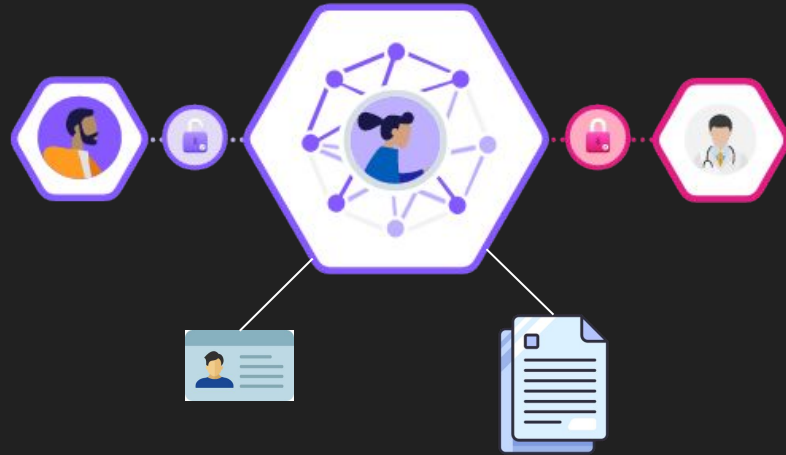

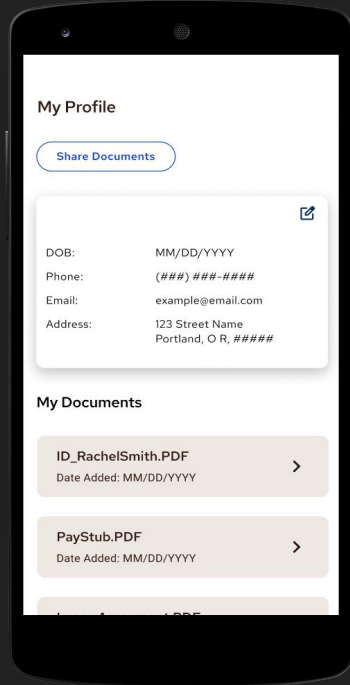

PASS: Features

Provide a Secure Digital Wallet for Users

Decentralized data infrastructure using SOLID data framework. Connects Service Providers and with clients.

PASS: Features

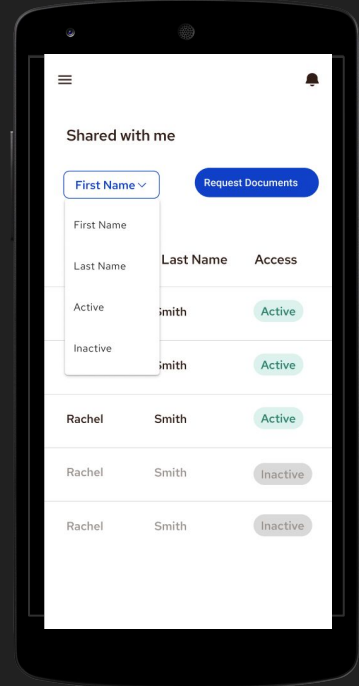

PASS: Solutions

Improve secure document retention for those experiencing housing insecurity.

Allows social workers to spend less time filing paperwork and more time actually helping people.

Any documents you help an individual collect and add to their PASS digital wallet is an easier application for someone in the future.

Clients will be able to keep their paperwork better organized and be more able to obtain the benefits they need.
